

GEMÜ Systems

System solutions from a single source

As a specialist in valve design, we also offer you individual system solutions. Starting from your idea, to development and right through to manufacturing, the whole process is taken care of under one roof. This means you can benefit from system solutions tailored to your specific requirements.

All from a single source

- Small systems, partial sections and subassemblies
- Individual connection solutions
- Samples for low-volume production
- Process optimization and special solutions
- Test rigs and prototype construction

Broad range of services

We support you with your individual requirements, from inquiries about customized individual components and ready-to-fit assemblies through to the joint development of complete systems. GEMÜ Systems differentiates between different levels. We are by your side, from simple welding configurations through to robotics.

Level 1:
Simple component assembly

Level 2:
Component assembly with control unit

Level 3:
Control systems and system development

Leading through experience

Thanks to our many years of experience in valves, measurement and control systems technology, we have specialist skills and technical expertise in various scopes of application. We value collaborative partnership when working on your project plans.

Your advantages

- Simplified procurement process
- Reduced number of interfaces
- Time and cost savings
- Outsourcing of order peaks

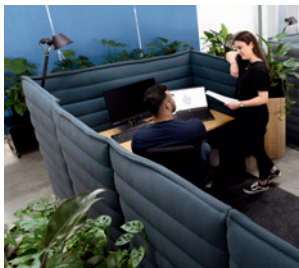

Latest technologies

Using the latest technologies and manufacturing processes, we can update our knowledge as a component manufacturer and carry this through to our system creation. With latest construction tools, we are ideally prepared and can help you take the next step towards your future.

Professional project processing

[1] Planning and conceptual design according to customer request

[2] Simulation and prototype development

[3] System construction with pre-series

[4] System and process qualification

[5] Project completion

Easy contact

Your GEMÜ consultant is available for you at all times

By precisely analysing the framework conditions, we are able to take into account your requirements during project processing. With our specification sheet and your drawings, we determine your requirements together and develop individual solutions for you.

You can discuss your project with your personal GEMÜ consultant. Alternatively, you are welcome to use our contact form for your system inquiry.
